

ACTIVITY - I

Test Summary Report: Sprint 5

1. Project Overview

Project Name	NopCommerce E-Commerce Web Application
Module Under Test	Category Module
Sprint Number	Sprint 05
Test Scope	Functional, UI, and Navigation Testing
Testing Environment	Chrome (v122), Windows 11, Mobile (Galaxy S22)

2. Execution Summary

The objective of Sprint 5 was to ensure users can seamlessly browse, filter, and view product categories. While the core navigation is stable, a minor issue was identified regarding image rendering on specific resolutions.

Total Test Cases	Executed	Passed	Failed	Pass %
10	10	9	1	90%

3. Module-Wise Status (Category)

Test Case ID	Test Case Description	Status
TC_CAT_01	Verify clicking "Electronics" opens the correct category page.	Pass
TC_CAT_02	Verify sub-categories (Cell phones, Others) display under Electronics.	Pass
TC_CAT_03	Verify "Apparel" category loads all relevant clothing items.	Pass
TC_CAT_04	Verify category breadcrumbs update correctly during navigation.	Pass
TC_CAT_05	Verify "Price Range" filter updates the product list accurately.	Pass
TC_CAT_06	Verify "Sort by: Name A-Z" reorders products correctly.	Pass
TC_CAT_07	Verify category menu remains visible on page scroll.	Pass
TC_CAT_08	Verify "No products found" appears in an empty category.	Pass

TC_CAT_09	Verify grid/list view toggle switches layout instantly.	Pass
TC_CAT_10	Verify category images do not overlap on 768px tablet view.	Fail

4. Defect Report (Sprint 5)

Bug ID	Severity	Priority	Description	Status
BUG-S 5-01	Medium	Medium	Category Image Overlap: On tablet resolution (768px), the "Electronics" and "Apparel" thumbnails overlap, making text unreadable.	Open

5. Key Highlights & Learnings

- **Success:** All primary navigation paths and filtering logic passed successfully.
- **Observation:** Performance was optimal; category pages loaded in under 2 seconds on Chrome.
- **Improvement:** The CSS for the category grid needs media query adjustments for mid-sized screens.

6. Conclusion

Final Status: CONDITIONAL PASS

The **Category Module** is functional for all primary desktop and mobile users. The 10% failure rate is limited to a specific UI layout issue on tablets. We recommend a UI patch before the final production release.
